PRODUCT
INFORMATION

ROBERTS® Pro Comfort Knee Pads are specifically designed for flooring installation. Featuring premium-grade neoprene and soft, non-pinching wide straps, these knee pads safeguard against impact to the knees, protect the knee caps, and provide cushioning for more comfortable kneeling. The upper padded strap, now 25% longer for improved fit and comfort, is specifically designed for use during knee kicking. Whether the flooring installation requires extended kneeling time like in a large commercial project, or short kneeling time during smaller residential projects, these knee pads create a comfortable barrier between the knees and the flooring surface.
