IIC measures sound such as moving furniture and walking, STC measures sound such as voices and television. International Building Code requires a minimum 50 for IIC and STC.

R-Value is the rating used to measure resistance to heat flow. Δ Delta Rating is the only true measurement of sound reduction from a product (not a floor assembly) in the industry

ROBERTS® AirGuard® Premium Underlayment is rated #1 for use under laminate and engineered wood flooring. With superior, advanced moisture protection, unparalleled mold / mildew defense, premium cushioning and superior sound control, no other underlayment even comes close.

INFORMATION

Our unique AirFlow Technology allows moisture from the subfloor to be released through micro holes in the bottom layer into the air pockets. Walking across the floor then creates pressure to move the air, redirecting and releasing moisture vapor through the room perimeter. The top layer blocks the moisture protecting the floor.
